

TURBO SMART CUBE

POWERFUL
SUCTION THAT'S
EFFICIENT,
SMALLER AND
QUIETER.

Turbo CUBE SMART is a semi wet suction system with INVERTER control for two - four surgeries. It is Cattani's most powerful suction system for its compact size.

Semi Wet Suction Systems for 2 - 4 simultaneous users with Integrated Acoustic Cover

Their superior design, mechanical precision and robust components allow all SMART suction systems to be backed by a 3-year parts and labour warranty, but now with an acoustic cover its even quieter.

FEATURES/SPECIFICATIONS

A simple and SMART way to grow

The advantage of a Cattani Micro SMART, is that while your practice grows, your suction system has the ability to grow with you. The Micro SMART allows you to expand on your current investment by adding a second Micro SMART in parallel, should your suction requirements change.

Equipped to work in parallel

Thanks to the inverter technology, multiple SMART systems can be installed in parallel providing your practice with the ability to easily expand capacity or to introduce built in back up.

Connecting a number of SMART suction systems together in parallel is a 'plug and play' exercise. With the inverters monitoring the system in harmony, parallel connection has never been so simple.

Acoustic Housing

The clever housing is designed with a cooling system to allow maximum air flow around the unit. Simple design, noise reduction of over 19 dB, and three easily removable panels for easy servicing & maintenance.
