

TURBO SMART

SMART SUCTION SYSTEMS

TAILORED SUCTION - FLEXIBLE BY NATURE.

Turbo SMART is a semi wet suction system with INVERTER control. It is Cattani's most versatile suction system known for its consistent high performance and can be supplied in many configurations to suit your suction requirements.

Semi wet suction systems for 2-20 simultaneous users

Their superior design, mechanical precision and robust components allow all SMART suction systems to be backed by a 3-year parts and labour warranty.

FEATURES/SPECIFICATIONS

The smartest sucker around

The Cattani Turbo SMART is the most powerful semi-wet suction unit on the market. It's also the smartest.

A simple and SMART way to grow

The advantage of a Cattani Turbo SMART, is that while your practice grows, your suction system has the ability to grow with you. The Turbo SMART allows you to expand on your current investment by adding a second Turbo SMART in parallel, should your suction requirements change.

SMART amalgam retention

The Cattani Hydrocyclone is a simple and effective amalgam retention system, designed for the range of SMART suction systems.

Equipped to work in parallel

Thanks to the inverter technology, multiple SMART systems can be installed in parallel providing your practice with the ability to easily expand capacity or to introduce built in back up.

Connecting a number of SMART suction systems together in parallel is a 'plug and play' exercise. With the inverters monitoring the system in harmony, parallel connection has never been so simple.
