

MICRO SMART CUBE

POWERFUL
SUCTION THAT'S
EFFICIENT,
SMALLER AND
QUIETER.

Micro CUBE SMART is a semi wet suction system with INVERTER control for one to two surgeries. It is Cattani's most powerful suction system for its compact size.

With the SMART Acoustic Housing omitting only 52dB, the MicroSMART CUBE can be installed almost anywhere in a practice.

Their superior design, mechanical precision and robust components allow all SMART suction systems to be backed by a 3-year parts and labour warranty, but now with an acoustic cover its even quieter.

FEATURES/SPECIFICATIONS

A simple and SMART way to grow

The advantage of a Cattani Micro SMART, is that while your practice grows, your suction system has the ability to grow with you. The Micro SMART allows you to expand on your current investment by adding a second Micro SMART in parallel, should your suction requirements change.

Amalgam Retention

Compact all in on design - The MicroSMART Cube has the CATTANI Hydrocyclone built in which is a simple and effective amalgam retention unit that fully integrates with all SMART suction systems.

It simply utilises the fluid pressure created by the suction system to achieve 98% amalgam retention in accordance to ISO 11143... all without the need for any moving parts!

Micro SMART Performance Presents

Micro SMART has the ability (when used for a single user application) to use three performance preset levels. Each preset is designed for a different application.
